

THE CREATION OF AN ELECTRONIC LIBRARY AND THEIR ADVANTAGES

Manzirova Mashhura, Sh. Tuychiyeva

UzDsmi "Library-Information the direction activity", student of the 3rd stage

Abstract. This article discusses the benefits of an electronic library. The concept of the Electronic Library, its components and capabilities were studied.

Key words: Information Library, institution, Electronic Library, virtual Library, Library, internet, virtual, digital library.

At the moment, the role of the information world in the life of each of us is much greater. All the knowledge of human history is concentrated in this world. We only need to know the internet to use the information. Since the first years of the 21st century, information and library services have been improving, contributing to the rapid change in the flow of information. The main tasks of information and library institutions are to create opportunities for the storage and use of the library fund. Due to the high level of development of information technologies in our country, information and library institutions have also acquired a new appearance, modern methods of preserving resources in libraries and expanding the possibilities of quality service for users have begun to be created. The first electronic libraries established in our country were jointly implemented by the Republican Information Library Center of the Republic of Uzbekistan and Korean specialists during the period 2008-2009. This project is based on the resolution of August 26, 2008 "on the creation of an electronic library of scientific and technical literature with the involvement of the Korean government grant, In accordance with the order of the communication and informatization Agency of Uzbekistan dated September 5, 2008, 259, on the basis of the information and Library Center "Bilim" in Tashkent on the basis of the agreement of both governments in order to further deepen the reforms in the field of information and librarianship and to carry out Uzbek-Korean cooperation was created on the basis.

Today, all information and library institutions of the Republic are equipped with advanced information computer technologies, first of all, in order to maximize the intellectual and cultural needs of the youth of the Republic, effective activities as an Information Library Center, which allows the wide use of national and foreign information and library funds, meets modern completely new, highest international standards. Through the implementation of the above-mentioned tasks, the country has begun to create digital(electronic) libraries based on its experience. Electronic libraries have been established in all operating information and library institutions, local and Internet access to information resources, provision of bibliographic information services, remote use and delivery of electronic resources, information and information service activities have been launched.

Electronic libraries are called differently: electronic library, virtual library, e-library, e-library, digital library. If we define electronic libraries: Electronic library is one of the great opportunities of the Internet. First of all, when we think of a library, long shelves with books come to our eyes. Now in the electronic library, the function of books is performed by internet pages. Using the electronic library is more convenient and easier than using the library. Because through it we can get information from the books in the voluntary electronic library of the world, which helps to save our

time. We can also use remote libraries and copy the necessary information. To use the electronic library, it is enough to have a computer and an Internet connection, which allows us to find the necessary information or book in a few minutes. A few years ago, it was necessary to spend months traveling to another city to find an article. Now there is no need to spend time going to another city.

Students of the "Electronic Libraries Course" at one of the US universities extracted 65 definitions of this term from the scientific literature and collected many common features. According to him, the electronic library

- has a logical organizational structure common to all parts.
- not only open access, but also contains educational components.
- effectively used human and technological resources.
- provides fast and efficient and barrier-free access.
- ownership and control of resources.
- large and long-term storage.
- contains various formats.

An electronic library has several possibilities compared to a regular library.

- space saving, i.e. no need for a special place to store books.
- the possibility of storing and using rare works and data.
- availability of search engines.
- saving time, that is, it can be used within 24 hours.

So, the electronic library is a collection of internet pages with various information. This page is prepared by special experts by regularly collecting computer input. That is, the information is constantly updated and the size of the library expands.

In conclusion, the advantages of the electronic library over the regular library are many convenient aspects for readers.
