Abstract: All general education schools in the regions were registered by the special commission and working group established by the order of the President of the Republic of Uzbekistan No. F-1910 of February 19, 2004. Their material and technical base was critically studied in detail. The school I attended was also on this list. I studied at the 22nd general education school in Fergana district of Fergana region.

Key words: requirements, gradually, includes, integral, gratitude.

Science is a small word consisting of three letters, which has a deep meaning, words are powerless to describe, but behind it there is a very big meaning. After this small sentence, great scholars, invincible generals, statesmen, princes and sultans, and great scholars who made a significant contribution to the country's prospects have grown up. Honorable President Shavkat Mirziyoyev, from the first days of his presidency, paid special attention to the issues of training innovative and creatively thinking, modern personnel in our country, educating young people in the spirit of patriotism and high spirituality, for this purpose, improving the education system and fundamentally reforming the school education system. are paying attention. All general education schools in the regions were registered by the special commission and working group established by the order of the President of the Republic of Uzbekistan No. F-1910 of February 19, 2004. Their material and technical base was critically studied in detail. The school I attended was also on this list. I studied at the 22nd general education school in Fergana district of Fergana region. The representatives of the working group that studied our school added the school to the list of schools to be completely reconstructed. In 2004-2009, a number of priorities were defined within the national program of the President of the Republic of Uzbekistan for the development of school education. Reforming the country's education system, fundamentally improving the school education system, forming the educational material base and educational standards that meet the highest modern requirements, gradually eliminating the differences between rural and urban schools, regardless of the place of residence. In order to ensure the creation of equal conditions for children's education, our school was completely renovated. The result of these works not only had a positive effect on the material and technical base of the school, but also on the mental activity of students. At the 9th session of the Oliy Majlis held on August 29, 1997, the Law of the Republic of Uzbekistan "On Education" was adopted in a new revision. According to it, a new system of education was introduced. According to Article 10 of the law, general secondary education is defined up to the 9th grade. After completing the ninth grade, I entered the Fergana City Industrial College, but I could not continue my studies due to certain family reasons. According to Article 21 of the Law "On Education" adopted by the Legislative Chamber of the Republic of Uzbekistan on May 19, 2020 and approved by the Senate on August 7, 2020-External education I passed the exam at the 13th general school of the mother city and received a certificate of 11th year of education. According to the law, extramural education

includes independent mastering of educational lessons, and at the end of it, students are required to pass final and state certifications in state educational institutions. Such types of education serve as a door to new opportunities for those of us who have not completed their education for various reasons, and on the other hand, they serve as a strong motivation to take bold steps towards a new life and the future. It is possible to see the results of the work on reforming the field of education, enriching it with a modern, technical base, in the example of a sharp increase in the rate of admission to higher educational institutions by young students. Just this year, more than 20 young men and women from our village were admitted to prestigious foreign universities on the basis of state grants. If the indicator of coverage of children of preschool education age with the preschool preparation system has reached 62 percent, in 2022-2023 it will increase to 90 percent, and by the end of 2024-2025, the coverage of 6-year-old children with the preschool preparation system will increase to 100 percent. kept in you. Special attention is paid to education in the development strategy for 2022-2026. As part of the attention given by the President to the education of women and girls, girls from needy families were admitted to master's education on the basis of a special additional quota state grant. The contract for women and girls studying at the master's degree was 100% covered by the state budget. The decree of the Honorable President dated August 11, 2020 "Additional measures aimed at involving the poor and unemployed population in entrepreneurship, increasing their labor activity and training in Kaaba-crafts, as well as ensuring employment of the population" According to the decision on "Ishga Merhamat" MONOCENTERS are providing services in 15 regions of our country. In the monocenter, representatives of the poor and unemployed population study in 22 fields. In particular, this year 32 women and girls and 19 boys from our village in need of social protection received free education at the monocenter. They were provided with jobs in the fields and areas of knowledge they received. This decision not only increases the quality of education, but also serves as a huge lever to reduce the number of poor people in need of social protection. The idea of our president to carry out education and training in an integral connection, i.e., education based on the model of universities of developed countries, and education in close connection based on our national traditions and values left by our ancestors, our nationalism in this field, It is no exaggeration to say that it was a wise decision of the leaders to carry out reforms without losing our identity. Such attention to such conditions and reforms in the field of education will, God willing, lead to the formation of a large number of mature personnel for the development of the country and the country's prospects in the future. I would like to express my gratitude to my teacher Turdiyeva Fatimakhan, who taught me in elementary school, for being a professional helper in helping me reach this level. I express my gratitude to On behalf of all young people, I would like to thank our honorable president for opening the door to such endless opportunities for us, and I promise that we will adequately respond to these opportunities in the future.
